Sovereign By Design.

Crogl runs every SOC workflow, from alert triage to threat hunting to advisory analysis, inside your own environment. The data never leaves. Your team focuses on decisions, not data gathering.

Alert Triage

Work the alert queue and close each one with a documented record. Analysts pick up escalations with the evidence already assembled.

SIEM | SOAR | Ticketing

Endpoint Investigation

Take EDR alerts past the endpoint and correlate them with identity, network, and cloud telemetry.

EDR | Identity | Network

Phishing

Trace reported mail from delivery to credential entry to post-compromise activity, and surface other recipients of the campaign.

Email | Email Security Identity

Threat Hunting

Build hypotheses from advisories and intel, then hunt them across your sources continuously. Not only when the queue goes quiet.

Threat Intel | Advisories | Data Sources

Cloud Posture

Catch misconfiguration and drift as it happens, investigate the blast radius, and map findings to CIS, SOC 2, and ISO 27001.

Cloud | IaC | Config

Threat Coverage

Query each source in its native format and join the results into one picture. Analysts ask in plain language, not SPL or KQL.

SIEM | Data Lake | Object Store

Security Advisory

Investigate advisories against your infrastructure, current and historical, with documentation a regulator will accept.

CVE Feeds | Advisories | ISAC

AI Agent Security

Monitor, govern, and audit agent actions against the OWASP Top 10 for Agentic AI.

Model Platforms | Agent Frameworks | Orchestration

USE CASE IN DEPTH

Vulnerability Blast Radius

Exploitation status and BOD due dates pulled live from CISA's KEV feed.

Reachability walked from the vulnerable host to what it can actually touch. AD FS, a finance pipeline, a backup relay.

Runs in your environment.
Queries your stack.
Now yours to run.

Sovereign by design.
Extensible architecture.
Predictable pricing, unlimited investigations.

A New Era In Threats

+28%
Alert volume growth year over year

<$5
AI is driving down the cost of running an attack

85M
Projected human capital shortage by 2030 (WEF)

Investigate every alert. Hunt every advisory. Document every action.

Customer Managed

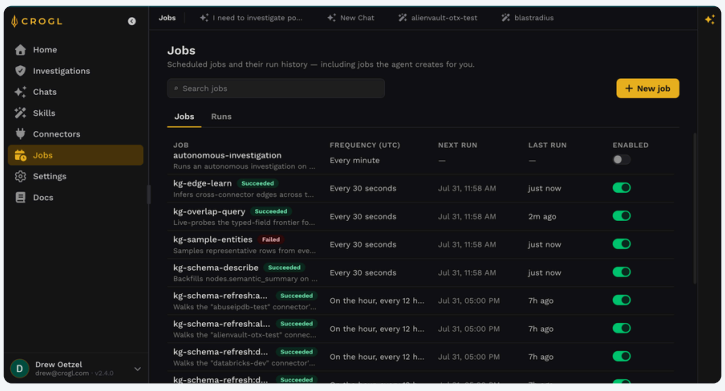

On-premises, private cloud, or fully air-gapped. No data leaves your environment. No exceptions.

Works With Your Stack Today

SIEM, EDR, ticketing, and data lake on day one. No schema normalization. No recoding.

Transparent and Auditable

Every action documented in your ticketing system. Crogl investigates. Analysts decide.

Full product.
No friction.
No strings attached.
